***Response to Amendment***

***Response to Amendment***

1. Acknowledgement is made of applicant having filed an amendment on 20 August 2002 and on 09 October 2002 wherein the amendment of 09 October 2002 canceled all pending claims and introduced new claims 95-166.

***Sequence Restriction Requirement***

2. The restriction requirement of 03 September 2002 is hereby vacated. A new restriction requirement follows.

3. Restriction to one of the following inventions is required under 35 U.S.C. 121:

Claims 95-166, while they are considered together for purposes of restriction, have been found to disclose a plurality of distinct inventions. In particular, the claims encompass a virtually infinite number of polynucleotide sequences that encode "a chimeric phosphorylation indicator," which in turn comprises a donor molecule, a phosphorylation domain, a phosphoaminoacid binding domain, and an acceptor molecule.

The sequences are patentably distinct because they are unrelated sequences. Applicants are permitted to elect a single sequence (See MPEP 803.04).

MPEP 803.04 states:

Nucleotide sequences encoding different proteins are structurally distinct chemical compounds and are unrelated to one another. These sequences are thus deemed to normally constitute independent and distinct inventions within the meaning of 35 U.S.C. 121. Absent evidence to the contrary, each such nucleotide sequence is presumed to represent an independent and distinct invention, subject to a restriction requirement pursuant to 35 U.S.C. 121 and 37 CFR 1.141 et seq. Nevertheless, to further aid the

Art Unit: 1634

biotechnology industry in protecting its intellectual property without creating an undue burden on the Office, the Commissioner has decided *sua sponte* to partially waive the requirements of 37 CFR 1.141 et seq. and permit a reasonable number of such nucleotide sequences to be claimed in a single application. See Examination of Patent Applications Containing Nucleotide Sequences, 1192 O.G. 68 (November 19, 1996).

It has been determined that normally ten sequences constitute a reasonable number for examination purposes. Accordingly, in most cases, up to ten independent and distinct nucleotide sequences will be examined in a single application without restriction. In addition to the specifically selected sequences, those sequences which are patentably indistinct from the selected sequences will also be examined. Furthermore, nucleotide sequences encoding the same protein are not considered to be independent and distinct inventions and will continue to be examined together.

4. Acknowledgement is made of claims 149-160 being drawn to a kit, claims 161, 162, 164, and 165 being drawn to a vector as well as claims 163 and 166 being drawn to corresponding host cells. Said claims 149-166 will be examined on the merits to the extent that they read on the elected chimeric sequence only.

NOTE: This is not an election of species but a restriction between patentably distinct entities.

5. Applicant is requested to submit with their response, an amendment whereby claims will be modified so to read only upon the elected embodiment.
